

### ***Color & Quality***

**Design in the RGB color mode.  
Bitmap images need to be 75 - 150ppi at actual size.  
Colors come out more vivid with this setting.**

### ***Live Area***

**This is what the audience will see.  
Place important text and images inside this area.  
If using our Dye Sublimation process add an additional 1" bleed to all sides.**

### ***Hemline***

**Keep images and text 2" from the border edge  
to prevent important graphics from falling onto  
the hemline or interrupted by a grommet.**

### ***Save File***

**Convert fonts to curves or paths before saving.  
Save as .png .jpg .pdf .tif .eps .svg  
Before saving remove the instructions & guide layers.**
