

# 22" size VividHead Drumhead Template

## IMPORTANT INFO for Raster Files:

- Resave this file as a TIFF or EPS file before working on your design.
- This file is 72 dpi at actual size. You can increase the size up to 150 dpi but do this before you start designing.
- Send a copy of your final design as a .jpg .eps or .tif file.

## DESIGN NOTES:

Create your design within the white circle area. Do not place your type or logo too close to the edge. This will make it easier to read.

## BLEED NOTES:

The black circle is the Bleed. We print the bleed area. You can see some of the bleed slightly, so you may want to design your image into this area OR just leave it the Black Color. Note 1/4" of the bleed will get cut off in final production.
